

Project Design Phase-I Solution Architecture

Date	19 September 2022
Team ID	PNT2022TMID04358
Project Name	Gas Leakage Monitoring and Alerting System
Maximum Marks	4 Marks

Development Phases:

Data Gathering:

We're going to collect the information using a variety of sensors.

Data Store:

Databases required and the cloud are used to store the collected data.

Data Analysis:

In case of emergency, data from the shop must be examined for escalating alerts.

Data Monitoring:

The user must see the collected data in order to monitor it.
